

FE Technologies
RFID Your Way

Laptop/ Tablet Dispenser

The FE Technologies Laptop and Tablet Dispenser is a secure and simple to use system that can be operated completely unattended, leaving your staff free to provide more high-value customer services.

FE Technologies offers an innovative self-service way for you to give your patrons access to high-value electronic devices. Laptops and tablets are stored in locked slots where it is automatically recharged and readily available for use. To borrow a device, patrons simply use a membership card and an intuitive touchscreen, and select from the available line-up.

The borrowed devices can then be returned by simply sliding the unit back into its slot. The dispenser manages your security and the "wiping" of each device after use, deleting any additional loaded software, thus taking the device back to its "home" state. The item will be removed from the patron's account, and show it has been returned. An optional payment facility with receipts is also available.

- The library chooses and controls the local software image using Deepfreeze technology.
- State-of-the-art anti-virus software prevents the download and spread of viruses onto any of the laptops and other devices.
- Anti-execution software prevents any potentially dangerous executables from being installed. You can create a whitelist of allowed software that will not be targeted and will remain installed on the device at all times, for example a choice of standard browsers, Windows or Macintosh office software etc.
- The Back-End Management Control System (which can be integrated into the LMS) allows for audit trails and full data reporting and helps empower administrators by giving them the information they need in real-time to manage the laptops effectively.
- Users are authorised by scanning their membership card and entering an optional PIN.
- A web-camera is also available as an add-on to the unit.

We'd love to discuss library RFID and its benefits with you and your team. We can gladly set up a demonstration of our products at your premises, arrange a tour of our site, or a visit to one of our up and running RFID libraries.
