Introducing On Hold Shelf

On Hold Shelf is a tried and trusted product from FE Technologies, and one that's ready to revolutionise the "on holds" process.

By allowing any and every old hold item to be managed without staff intervention, On Hold Shelf puts you back in control:

- Staff no longer have to manually prepare on hold items for patrons
- Items are quickly placed on the hold shelves with their numbered cubicles
- Patrons are automatically notified when their hold is available for collection

By allowing patrons to collect on hold items with nothing more than a quick scan of their library card, this smart system instantly frees up experienced staff.

And in the case of on hold items that are not collected; they're automatically held for the next patron in the library without your staff having to do a thing. Just what you want when you need a smart system that allows you to get more done in half the time.

Interactive Kiosk Station

An integrated kiosk station, complete with touch screen display, allows patrons to quickly find their on hold items as soon as they walk through the door. Everything is initiated with nothing but a quick scan of their library card, and the allocated cubicle number appears for stress-free collection.

Positioning Metal Cubicles

All of our on hold shelves are made using positioning metal cubicles controlled with individual antennas. Ideal when you want to increase cubicle accuracy to position items on the shelves.

Cubicle Numbers

Each cubicle is assigned a number, making it easy for any patron to track down their on hold item. It's the tried and tested way to boost your borrowing rates while using less staff time.

Modular Design

Every main shelf is assembled from 7 standard cubicles, and additional shelves of 7 cubicles can easily be added to the main unit. By linking up to 8 units together, you can create a unique layout to meet the exact needs of your patrons. And because each shelf module provides 122 inches of linear shelf space, you can use it to accommodate up to 120 books with ease.

Customized Shelf Colors & Cabinets

Your new on hold shelf comes expertly finished in a standard black color for both the cabinetry and inner shelf body. If you wish to customize the color according to your own color theme, simply get in touch and let us know what you need.

Smart Handling For Large Books

A taller cubicle is also included which allows larger on hold items such as tall books or magazines to be stored without any delays. Perfect for the flexible solution that will make all the difference.

Automatic check in of on hold items

On hold items are placed in an available cubicle, allowing the system to auto assign the item to the specific patron's account. By removing the need for manual staff intervention, this powerful new system frees up experienced staff for higher value tasks.

Expired hold reports

When an item is retrieved, it will be removed from the inventory. If on hold items are not collected and have expired, the system automatically checks all items back into the ILS, and assigns it to a waiting patron if it's currently in the queue. Any left over expired items are listed by cubicle in the expired hold report. Ideal for smoothing out the hold process for library staff.

No hold slips required

Reduce waste and manual tasks by eliminating the need for hold slips once and for all. Exactly what's needed when it's time to streamline your library operations the smart way.
